Problem Statement

- Create a bank project.
- Where you can store the customer details.
- Give the option to:
 - a. Deposit money
 - b. Withdraw money
 - c. Check the balance and display the final balance
 - d. Display the list of customers of the bank with the final balance
 - e. Transaction Details.
- Use case and switch, collection to store the customer details and transaction details.
- Minimum balance should be Rs.1000

Code Description

1. BankingApp.java

This java file contains the switch case statement condition in this we have 6 case condition and we take input in the form of array having bank details.

2. BankDetails.java

The BankDetails file contains the variable that are used in bank details. It also contains method openAccount(), showAllAccount(), showAccount(), deposit(), withdrawal() and search().

3. Transaction.java

This file contains the variable of transaction method and i use getters and setters method in this file.

4. TransactionDetails.java

This file contains the LinkedList to store the transaction details of the customer by account number. So in this file i use collection.

Thank You!
